**ABSTRACT**

Space divider or better known as the partition is a separator between two areas used instead of a permanent wall. In Faculty of Art & Design (AD), a partition is one of the most important needed equipment. It is often used primarily during the day of assessment of student work, presentation of ideas, learning, and teaching processes, as well as being used during events and faculty's programmes. The use of partitions is more to showcase office posters, notice of up-to-date information and current issues and even used as stage backdrop decoration. However, the frequent problem faced by the Faculty of Art & Design is the storage of these partitions as the partition existing are difficult to store and keep. Additionally, limited space in Faculty of Art & Design also causes existing partitions to be difficult to maintain, organized, and secure. Consequently, this issue creates a creative idea to innovate the current partition in Faculty of Art & Design to be more flexible and user!Friendly and more compact design. Partition named ‘3M Partition’ is characterized by its 3M Partition is produced not only for use at the Faculty of Art & Design, but it can also be used for programme implementation purposes such as Academic, Mission, Seminar, Professional Talk, as well as for outdoor activities including student programmes. On the commercial side, this partition is expected to meet market needs as it is the primary equipment of the programme involving creative industries, government agencies, private or corporate.

**OBJECTIVES**

- Facilitate space-friendly storage
- Easier handling of installation and dining angles
- Compact and fold
- Neat and faster installment
- Portable (exhibition grounds)

**PROBLEM STATEMENT**

The most frequent problem with the Faculty of Art & Design is the burden of storage of the existing partition and is hard to manage. Limited space in Faculty of Art & Design also causes existing partitions to be difficult to maintain, organized and secure.

**NOVELTY**

This separator is functional on both sides making it the first separator that can fold and a real space saver. It is easy to maintain, and lighter than the existing current separator ensures easy handling.

**POTENTIAL & COMMERCIALISATION**

This separator is expected to meet the needs of the market as it is the essential equipment of the programme involving creative industries, government agencies, private or corporate.
